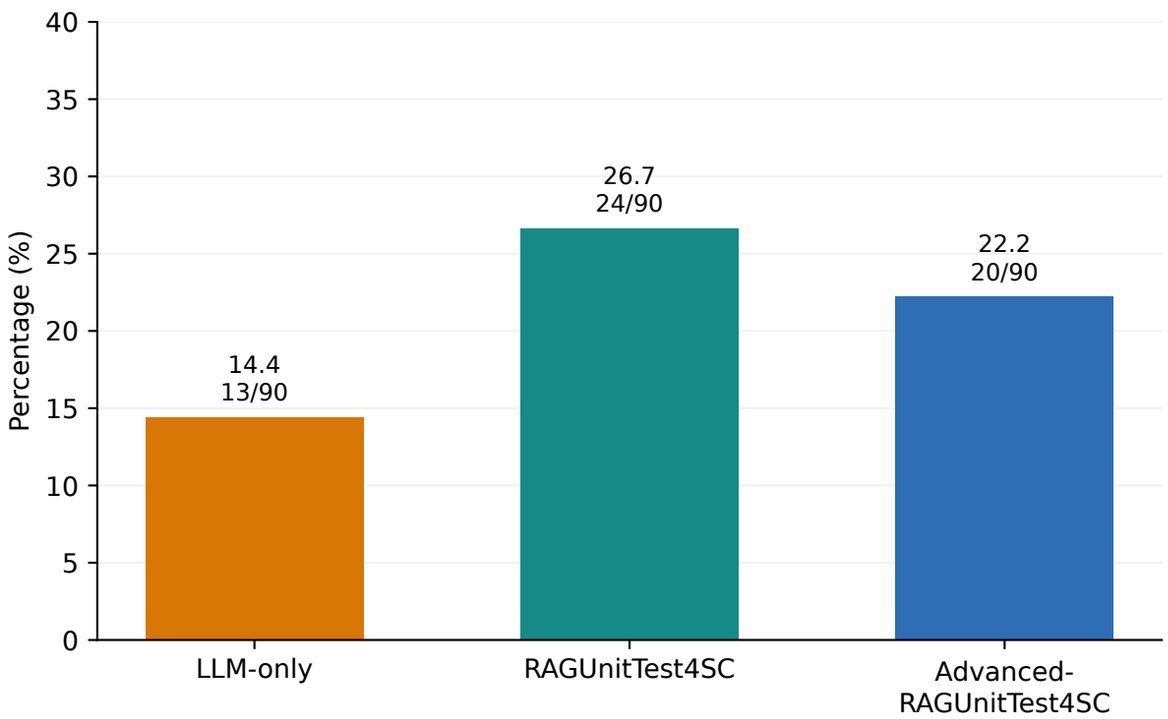
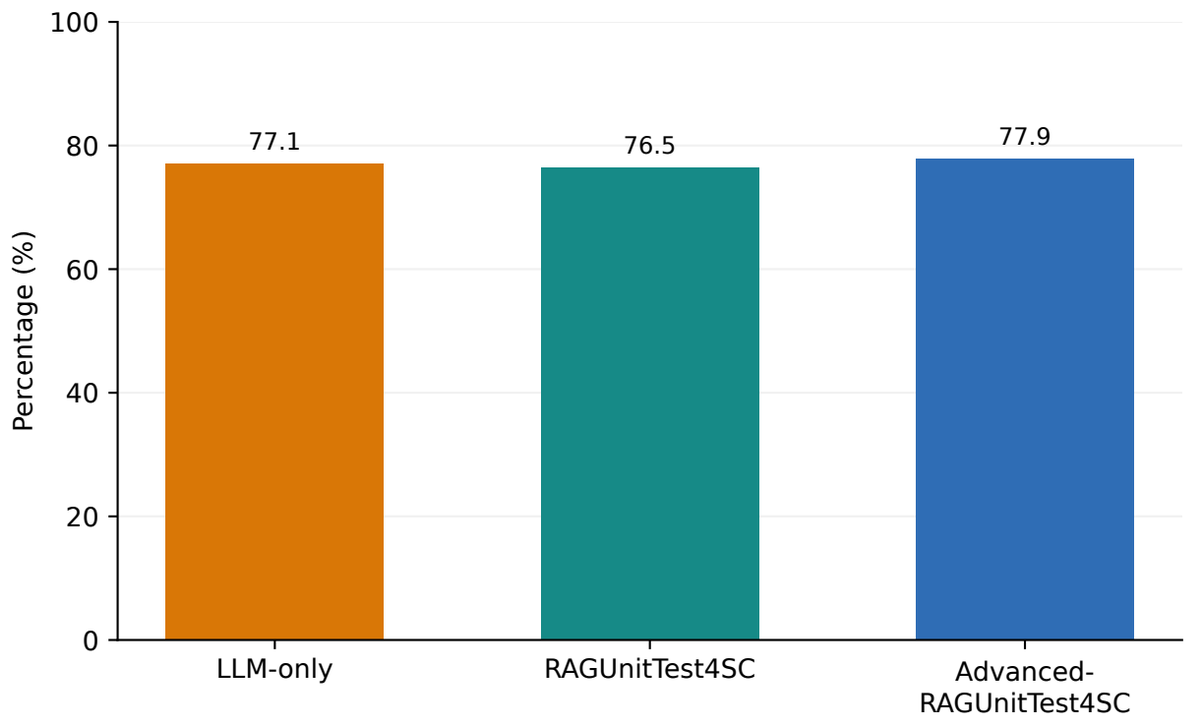
Corpus v2 campaign — three configurations

30 contracts · 3 repetitions · 90 suites per method · ethers 6 · Codestral 2508, temperature 0

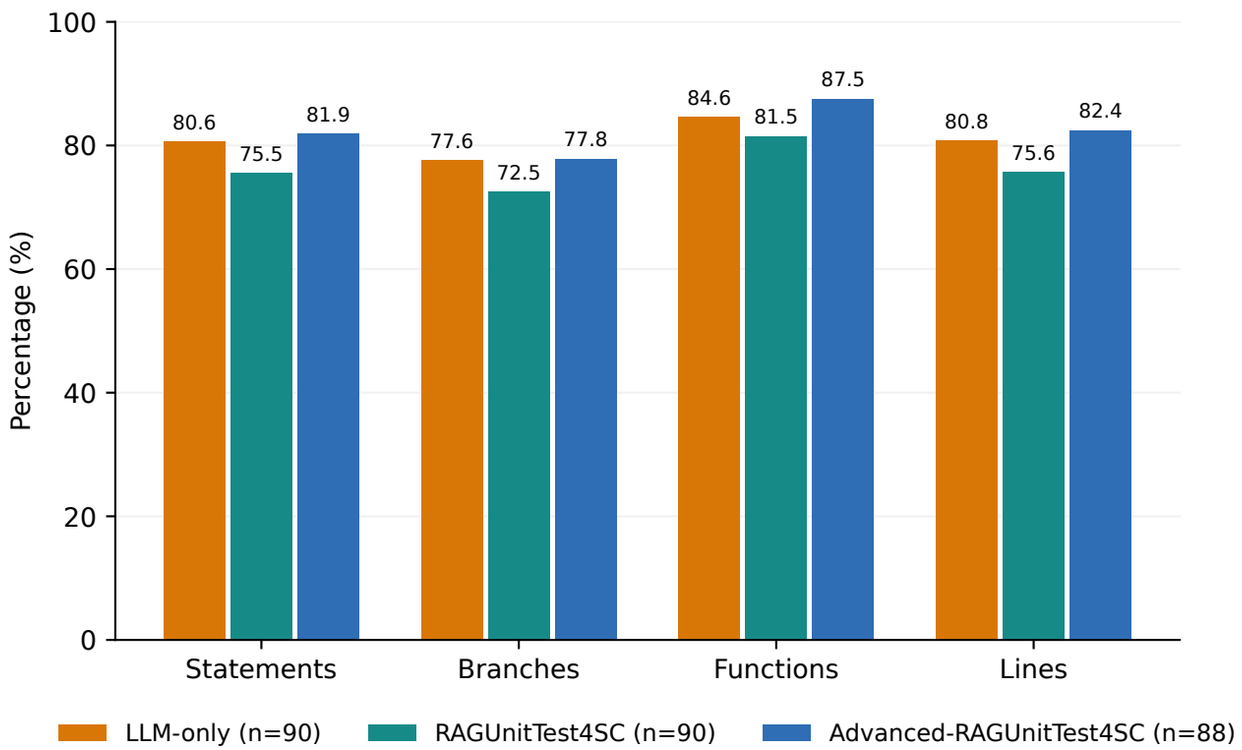
Fully passing suites — FPSR (30 contracts)



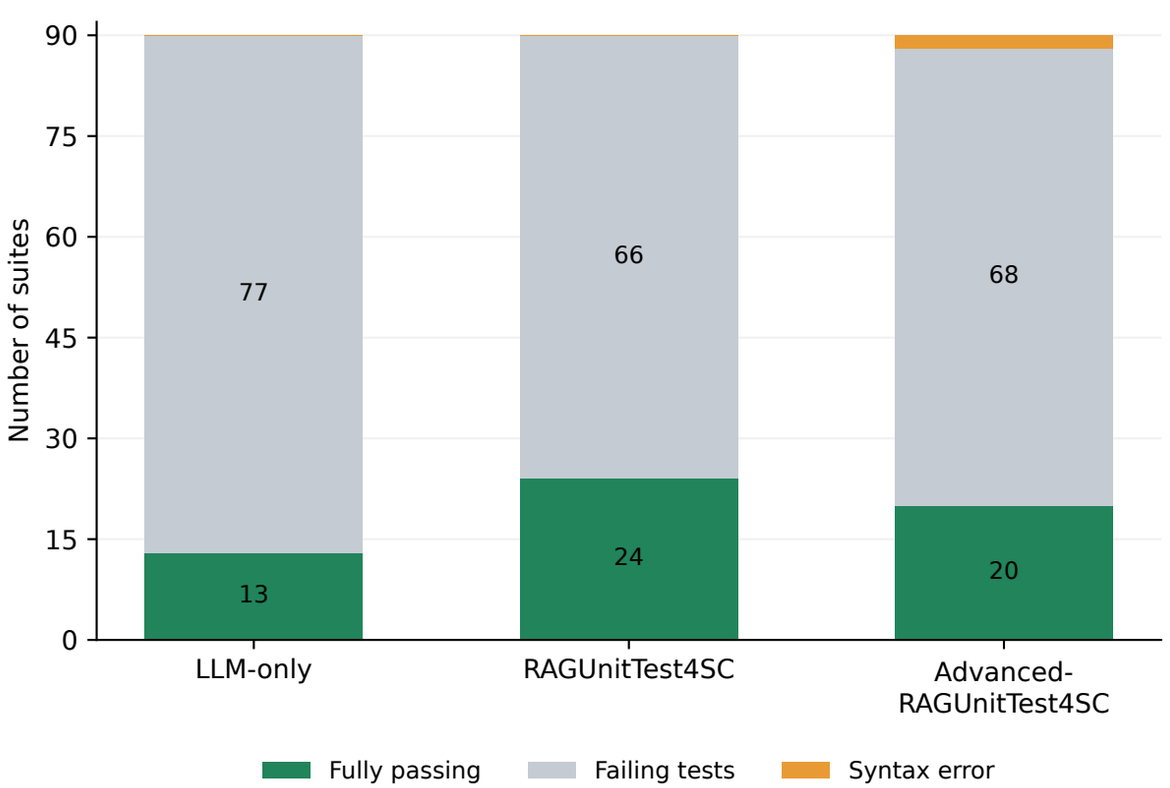
Passing reported tests — TPR (30 contracts)



Mean target-contract coverage (all 30 contracts)



Final status of the 90 suites per method



FPSR is the primary endpoint. Paired vs LLM-only (exact McNemar, 30 contracts): RAGUnitTest4SC 15 vs 4, p = 0.019; Advanced-RAGUnitTest4SC 12 vs 5, p = 0.143.
TPR = passing / (passing + failing) reported tests; failing hooks can prevent tests from running.
Mean of available target-coverage reports, fixtures excluded; missing values are not replaced by zero.
Repetitions use temperature 0 and seed 42; they are not independent draws.
